

AJIYA URBAN RISE LTD

PHASE 1 WEBSITE PRODUCT & DESIGN SPECIFICATION

Product Definition, User Experience, Design Direction and Functional Requirements

1. Document Purpose

This specification is the practical design and development guide for the Phase 1 AJIYA Urban Rise website. It is intended to align UI/UX designers, frontend and backend developers, creative directors, content teams and AI website-building tools around a shared product definition.

2. Product Definition

Product Name: AJIYA Urban Rise Digital Platform — Phase 1

Product Type: Premium corporate and real-estate showcase website.

Primary Purpose: Establish AJIYA Urban Rise Ltd as a credible, modern and ambitious real-estate company; showcase its services and developments; and generate qualified customer and investor enquiries.

Core Product Functions:

- Understand the company
- Explore AJIYA services
- Discover projects
- Browse featured property opportunities
- Learn about investment opportunities
- Read company and industry insights
- Request information
- Contact the company
- Book a property inspection or consultation

3. Target Users

Primary Users

Property Buyers: People looking for land, homes, residential developments and property opportunities. Key questions include: What does AJIYA have available? Can I trust this company? Where are the projects located? How do I get more information?

Property Investors: People interested in land investments, real-estate growth, development opportunities and long-term property value. Key questions include: Why should I invest? What opportunities exist? What projects is AJIYA developing? How do I speak with the investment team?

Secondary Users

- First-time home buyers
- Corporate clients
- Real-estate agents and partners

- 404 Page

5. Homepage Product Specification

The homepage is the primary entry point and storytelling experience. It should guide visitors through:

Opportunity → Company → Expertise → Projects → Investment → Trust → Action

Hero: Full-screen cinematic imagery or video featuring architecture, estate imagery, construction, homes, land and urban development. Suggested headline: "Creating Opportunities. Building Lasting Value." Primary CTA: "Explore Our Projects." Secondary CTA: "Talk to an Expert."

About AJIYA: Introduce the company and its philosophy through the narrative Land → Development → Community → Legacy.

Services: Present Real Estate Development, Property Sales, Real Estate Investment, Property Management and Construction.

Featured Projects: Showcase AJIYA Signature Estate and Urban Rise Estate through editorial, immersive presentations.

Vision for Urban Growth: Communicate that real estate is more than land and buildings—it is opportunity, security, growth, community and legacy.

Invest With AJIYA: Introduce the investment philosophy and direct interested visitors toward an investment enquiry.

Why AJIYA: Build trust around Opportunity, Value, Reliability and Legacy.

Insights: Feature real-estate education, market insights, project updates, construction updates and company news.

Final CTA: "Your Next Opportunity Could Start Here."

6. Navigation Specification

Desktop navigation should be minimal, elegant and highly readable.

Structure:

- AJIYA Urban Rise logo
- Main navigation
- Prominent CTA: “Talk to an Expert”

Behaviour:

At the top of the homepage, navigation may sit transparently over the hero. During scroll, it should transition into a solid or glass-style navigation. Mobile navigation should use a large, clear overlay or full-screen menu experience.

7. Services Product Specification

Present the five primary services:

- Real Estate Development
- Property Sales
- Real Estate Investment
- Property Management
- Construction

Each service component should contain a title, concise description, visual image and link to detailed information. Hover interactions may use subtle image movement, emphasis changes and directional cues.

8. Featured Projects Specification

AJIYA Signature Estate and Urban Rise Estate should be among the strongest visual components of the website.

Each project preview should include:

- Hero image
- Short story
- Location
- Project category
- Status
- “Explore the Project” CTA

Projects should feel editorial and immersive, using scroll reveals, image expansion, text overlays and smooth transitions. Avoid cluttered traditional listing-card treatment.

9. Individual Project Page Specification

Each project should have its own focused digital experience.

Recommended structure:

1. Cinematic project hero with project name, location and short statement
2. Project story
3. Development vision
4. Project highlights and visual exploration
5. Image gallery and video
6. Location, map, landmarks and connectivity
7. Project progress
8. Conversion section with Request Information, Book an Inspection and Talk to an Expert

Phase 2 may later introduce interactive master plans, 3D exploration, live availability and virtual tours.

10. Properties Page Specification

Phase 1 uses a curated showcase model rather than a full marketplace.

Categories:

- Land
- Residential
- Commercial

Each property card should include a primary image, property name, location, category, key highlights and an enquiry CTA.

Phase 2 may add advanced search, filters, saved properties, comparison and live availability.

11. Property Detail Page

Selected properties should have dedicated detail pages featuring:

- Hero image
- Property name
- Location
- Category
- Property overview
- Key highlights
- High-quality gallery
- Location and map context
- Clear actions: Request Information, Book an Inspection and Talk to an Expert

12. Invest With Us Page

Purpose: Position AJIYA as a partner for long-term real-estate opportunity.

Hero: "Build Wealth Through Real Estate."

Recommended sections:

- Why Real Estate?
- Investment opportunity categories
- The AJIYA approach: Discover → Evaluate → Invest → Build Long-Term Value
- CTA: Speak With Our Investment Team

Phase 1 remains informational and lead-focused. The full investor platform belongs in Phase 2.

13. Insights Product Specification

The Insights section should build credibility and search visibility.

Categories:

- Real Estate
- Investment
- Land
- Construction

- Market Insights
- Company News
- Project Updates

Individual article pages should include headline, feature image, publication date, reading time, article body, related articles and a relevant CTA.

14. Contact Page

Primary engagement options:

- Call
- WhatsApp
- Send an Enquiry
- Visit Our Office

Office:

Suite 1021, Third Floor
Los Angeles Mall
Ahmadu Bello Way
Mabushi, Abuja, Nigeria

Suggested enquiry form fields:

- Full name
- Email
- Phone number
- Enquiry type
- Message

Enquiry types:

- Buy Property
- Land
- Investment
- Property Management
- Construction
- General Enquiry

15. Call-to-Action Strategy

Every major page should have a clear primary conversion action.

Recommended CTAs:

Homepage — Explore Our Projects

Project Pages — Make an Enquiry

Properties — Request Information

Investment — Speak With Our Investment Team

Services — Talk to Our Team

Contact — Send an Enquiry

16. Enquiry Workflow

Phase 1 workflow:

Visitor → Selects CTA → Completes Enquiry Form → Receives Confirmation → AJIYA Team Receives Lead → Team Contacts Visitor

The system should capture enquiry context. For example, a lead generated from AJIYA Signature Estate should be tagged with that project as its source.

17. WhatsApp Integration

Provide a persistent but non-intrusive WhatsApp entry point.

On project or property pages, messages should be contextual, for example: "Hello, I am interested in learning more about AJIYA Signature Estate."

WhatsApp should reduce enquiry friction while maintaining a clear connection between conversations and the page or project that generated the interest.

18. Animation Design Specification

Animation philosophy: Motion should communicate quality, depth and intention.

Use motion for:

- Story transitions
- Image reveals
- Page transitions
- Major statements
- Project showcases

Avoid:

- Excessive bouncing
- Unnecessary looping
- Slow navigation
- Overly complex effects

Recommended motion system:

- Soft text reveals
- Image mask reveals and subtle scaling
- Smooth scroll-driven transitions
- Small card hover interactions
- Elegant page entry and exit transitions

19. Visual Design Direction

The visual language should combine:

Luxury — refined spacing, large imagery and editorial presentation.

Modern Urban — contemporary typography, strong grids and confident layouts.

Architecture — clean structure, whitespace and visual discipline.

Nigerian Context — imagery and storytelling that naturally connect with Abuja, urban growth, land, development, communities and Nigerian property opportunity.

The website should not feel like a generic international template with AJIYA branding added.

20. Mobile Product Specification

Mobile should be treated as a first-class experience, not merely a reduced desktop layout.

Priorities:

- Fast loading
- Simple navigation
- Large touch targets
- Clear CTAs
- Optimized imagery
- Easy forms
- WhatsApp access
- Excellent readability

Use a prominent menu overlay and ensure major conversion actions remain easy to reach.

21. Phase 1 Content Management Requirements

The content system should support management of:

Projects:

- Project name
- Description
- Images
- Videos
- Status
- Location

Properties:

- Name
- Category
- Location
- Images
- Description
- Highlights

Insights:

- Articles
- Images
- Categories
- Authors

The initial management layer may be simple but should be structured for future expansion.

22. Technical Requirements

Phase 1 should prioritize:

- Performance
- Responsiveness
- SEO
- Scalability
- Security
- Analytics

Analytics should help track:

- Website visits
- Project interest
- CTA clicks
- Enquiry submissions
- Most visited pages

23. Phase 1 vs Phase 2 Boundary

Phase 1:

Brand + Story + Projects + Services + Property Showcase + Lead Generation

Phase 2:

Property Platform + Accounts + Reservation + Payments + Investor Dashboard + Admin System

This boundary keeps Phase 1 focused while preserving a clear path toward a broader digital real-estate ecosystem.

24. Phase 1 Success Metrics

Measure:

- Number of qualified enquiries
- Project page visits
- Property interest
- Inspection requests
- Investment enquiries
- WhatsApp conversations
- Contact form conversion rate
- Most popular projects and services

25. Final Product Definition

Phase 1 is the digital front door of AJIYA Urban Rise Ltd.

It should introduce the company's world, communicate its ambitions, showcase what it is building and create clear pathways for buyers, investors and clients to begin a relationship with the company.

The final experience should feel:

Premium. Modern. Confident. Trustworthy. Ambitious. Nigerian.
